Light snow	Heavy snow	Heavy snow	Light snow	Light snow	Heavy snow
Precipitation probability					
30%	80%	90%	90%	90%	90%

Forecast for Thursday 08 Feb 2024

Weather: While possibly still dry at daybreak, outbreaks of snow will soon spread from the south, though falling as rain at low levels and becoming persistent and heavy at times. Easterly gales will bring blizzard conditions once accumulations start to build up, with blowing snow bringing whiteout conditions. Below 150m it should stay as rain, perhaps sleet at times, with snow level fluctuating around the 200-300m mark, perhaps rising towards midnight.

Chance of cloud-free hill tops above 700m: 70% first thing but quickly falling 10%.

Low cloud and visibility: Cloud above tops at first but soon lowering to 500m with patches to 300m in morning and remaining low through the day. In any case blowing snow will bring white-out conditions, and at lower levels, rain and wet snow will also be heavy enough to bring poor visibility.

Meteorologist's View

Severe conditions quickly developing on the hills

Forecast for Friday 09 Feb 2024

Weather: Cloudy with further outbreaks of rain and snow, the snow becoming more confined to upper slopes through the day and even there, probably turning to rain or drizzle later.

Maximum wind: Easterly 40 gusts 55mph easing 25 gusts 35mph in the afternoon.

Chance of cloud-free hill tops above 700m: 10%

Low cloud and visibility: Extensive, persistent low cloud lowering 300 to 500m. Poor visibility even away from cloud due to snow, or rain and drizzle.

Temperature: **Valleys:** Plus 3 rising to Plus 5 Celsius.
At 700m: Minus 2 rising to Plus 1 Celsius.
Freezing level: 450m rising to 750m, then to just above summits late in the day.
